

Kapil Kashyap

Mumbai, India | +91 7304219586 | kapilkashyap3105.work@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Ruby, C, C++, SQL, R

Backend & Web: Spring Boot, Node.js, Express.js, RESTful APIs, React.js, Flask, Tailwind CSS, Three.js

Databases: MySQL, PostgreSQL, MongoDB, SQLite, Redis, Materialized Views

Cloud & DevOps: AWS (ECS, Lambda, EC2, S3, RDS), Docker, Kubernetes, GitHub Actions (CI/CD), Maven, Capistrano

AI / ML: Scikit-learn, Keras, PyTorch, OpenCV, NLTK, NumPy, Pandas, Matplotlib, NLP, Computer Vision, LLMs, RAG

Data & Analytics: Power BI, Tableau, ETL Pipelines, Time Series Forecasting, Statistical Modelling, XGBoost, Feature Engineering

Tools & Practices: Postman, Swagger, Figma, Jira, Git, RabbitMQ, RSpec, JUnit, Mockito, System Design, API Design

PROFESSIONAL EXPERIENCE

Indus Valley Partners

Apr 2026 – Present

Associate Software Engineer

- Built and owned the development of a deterministic two-stage Recon Break Classifier end-to-end: a Decision Tree for high-confidence immediate predictions and an LLM fallback for edge cases, automating reconciliation triage at scale.
- Added Auto Rule Discovery to surface and match new reconciliation rules with $\geq 75\%$ occurrence frequency in breaks, reducing manual analyst effort.
- Integrated AMP (Accelerated Mobile Pages) components into email notifications, enabling rule acceptance directly from inbox and eliminating dashboard logins for routine approvals.
- Currently serving as Reviewer for the International Journal of Informatics and Communication Technology (Open Access).

Skima AI

Jul 2025 – Mar 2026

Software Development Engineer I (SDE-1)

- Star Employee of the Month (Sep 2025)** Awarded
- Owned CareerfitAI end-to-end — development, deployment, and maintenance — managing AWS infrastructure, RabbitMQ queues, Hutch consumers, and Capistrano deployments for 25+ enterprise users with high uptime.
- Architected and scaled an AI Video Interview System using ElevenLabs voice agents to handle 40,000 applications; supported 1,000+ interviews with 50 simultaneous sessions for L&T, a Fortune-500 client.
- Designed and integrated a Typeform-like post-offer candidate document system with Workline for NYKAA, streamlining onboarding workflows for a major e-commerce client.
- Integrated 5 ATS platforms (BambooHR, Ashby, Lever, RecruitCRM, Unified.to, Knit) via bidirectional API, ingesting 1M+ candidates, 25K+ jobs, and 500K+ applications into the Skima Dashboard.
- Built a Service ARM scraping layer for ATS platforms lacking direct API access and implemented human-like web scraping with Cron-based sync to keep data current across the ecosystem.
- Reduced critical API response times from 25 seconds to 400–500ms through query tuning, code refactoring, and materialized views across a 1M+ record dataset and achieved a 98% latency improvement.
- Implemented company-wide mandatory MFA using TOTP verification, QR setup flow, account lockout after 3 failed attempts, and session-based interception (device-two-factor gem).
- Built and shipped a CI/CD pipeline using GitHub Actions, eliminating manual deployment steps and reducing release cycle time.
- Co-developed SKIMA-BOT, a conversational AI assistant (GPT-4o Mini + Grok) enabling recruiters to perform candidate search, job management, and status updates directly via chat.
- Mentored 2 junior engineers through structured KT sessions on core systems, architecture, and development workflows.

Dwarkadas J. Sanghvi COE

Aug 2024 – May 2025

Teaching Assistant – Processor Architecture & Information Security

- Supported instruction for 80+ students; created 15+ structured notes and slides; provided 1-on-1 mentoring resulting in a 20% average improvement in test scores.

Suvidha Foundation

June 2024- July 2024

Web Developer Intern

- Designed and developed responsive web pages for organizational campaigns, improving user engagement by 25%.
- Enhanced the organization's web application using React.js, focusing on component architecture and state management. while adding web vitals monitoring and optimization for better user experience and reducing load times by 30%.

EDUCATION

Dwarkadas J. Sanghvi College of Engineering

Dec 2021 – May 2025

B.Tech Computer Engineering – Honors in Intelligent Computing **GPA: 8.91 / 10**

Coursework: Data Structures, OS, Computer Networks, DBMS, Advanced Algorithms, ML, Deep Learning, NLP

RESEARCH PUBLICATIONS

Weighted Voting Detection for Liver Fibrosis and Cirrhosis

Journal of Neonatal Surgery, Vol. 14, Apr 2025 | 4 citations

- Developed a non-invasive liver diagnostic aid integrating clinical data (XGBoost) with ultrasound imaging (DenseNet-201) via a novel soft voting classifier, achieving 92.5% diagnostic accuracy.

Dynamic Neural Style Transfer for Artistic Image Generation using VGG19

IJERCSE Vol. 12, Issue 01 | 7 citations

- Designed a multi-style neural transfer system with VGG19 featuring customizable style weight ratios and optimized processing pipeline.

Hybrid Predictive Modelling for F1 Race Outcomes: Random Forest + Graph Neural Networks

Accepted – 2nd Int'l Conference on Computing Systems & Intelligent Applications 2025

- Integrated GNN with Random Forest outputs using node embeddings for dependency modeling; built a dynamic 3D interactive visualization of race events and predictions.

KEY PROJECTS

JobGpt – Scalable Job Market Search Engine *Mar 2024 – May 2024*

- Ingested 12,000+ daily job listings from Wellfound via headless browsers and REST APIs; deployed on Kubernetes with AWS RDS; achieved 99.5% uptime with distributed task queues and retry fallbacks.
- Reduced data latency by 40% using debounced triggers and Redis caching.

Stock Forecasting & COVID-19 Event Impact Analysis *May 2025*

- Built an ensemble forecasting model (Prophet + ETS) on 15 years of stock data, reducing MAPE by 20%; quantified COVID-19 abnormal returns via event study analysis; surfaced insights via Power BI dashboard.

Customer Churn Prediction System *Jan 2025 – Feb 2025*

- Achieved 98% accuracy with a hybrid XGBoost + Logistic Regression model; reduced customer acquisition costs by 12% by targeting high-risk segments; built an ETL + Power BI dashboard for retention tracking.

Disease Outbreak Prediction using LLMs + Deep Learning *Apr 2024 – May 2024*

- Combined DistilBERT embeddings with a hybrid deep learning architecture on historical disease and climate data; achieved $R^2 = 0.95$ on the Influenza test dataset for outbreak severity prediction in India.

AWARDS & CERTIFICATIONS

- Global Rank 20 – Codechef Starters 135 (Div 3); International Rank 3 – Informatics Olympiad; State Rank 1 – Informatics Olympiad; State Rank 2 – Mathematics Olympiad
- Certifications: Computer Vision (Multicon TCET); Artificial Intelligence & Machine Learning (What After College)
